

## **MEDIOMUNDO arquitectos**

MEDIOMUNDO arquitectos established 2007 by Marta Pelegrín and Fernando Pérez, is a firm for the production of architecture and innovation research.

Marta Pelegrín and Fernando Pérez lead a team with an extensive international experience in design and project management. The studio focusses both on big scale projects, like urban masterplans and public space design, residential, educational and facility projects, as well as in the detailed scale design and management, like exhibition design, interior design, retail and products, both in heritage and new environments.

Their approach is cooperative, hands-on and based on lateral thinking. The coherence of the firm's work is based on a distinctive way of working that deliberately supports interaction of professional practice, research and teaching, taking part in wider teams that constantly enriches the principles of their work.

Each architecture project is developed from the search for a specific solution, with clients and society as essential reference points. The response to the programme, context, budget and time constraints are our main concern.
